Gelatin, Liquid, Split-Capsule Conveying Solutions

Efficiency Meets Ease of Use. Guaranteed.

No scooping or dumping. Higher productivity. Easier handling & mobility. 100% electric. No compressed-air required. VAC-U-MAX Gel Cap & Capsule Conveying System was designed to revolutionize your packaging process.

Engineered for easy handling of gelatin, liquid-filled and split capsules, VAC-U-MAX's Gel Cap and Capsule Conveying System is furnished as a ready-to-operate system featuring a 316 stainless steel filterless vacuum receiver, vibratory tray feeder, level probe, programmable controller, vacuum source, convey hose, conveying wand— and more! System eliminates manual scooping of product and messy dumping or mishandling. Material is drawn directly from drums, boxes, storage containers or feedbins.

HOW IT WORKS

VAC-U-MAX Gel Cap & Capsule Conveying System provides gentle and damage-free vacuum transfer of product to counting, polishing, inspection, weighing, filling, and packaging stations. System utilizes a continuous-duty direct-drive vacuum producer — no compressed-air required with UL and C-UL certified NEMA 4/12 or NEMA 4X programmable control panel.

Typical installation shown with inspection and packaging equipment featuring VAC-U-MAX Gel Cap Conveyer

SYSTEM COMPONENTS

FEATURES & BENEFITS:

- Continuous-duty direct-drive vacuum producer
- No compressed-air required
- Compact filterless vacuum receiver
- Full opening dump valve
- 316 stainless steel construction
- Easy-to-clean - no tools required
- Programmable controller
- Vibratory tray feeder
- Portable frame with tilt tray
- Optional level probe
- Food-grade smooth bore hose & vacuum nozzle

THE VAC-U-MAX DISTINCTION:

- “No edges, no ledges”
- Faster processing time
- Sanitary USDA designs
- Quick-clean & take-apart
- No special tools required
- Low profile, mobile design
- Made in the USA
- Local product support
- Performance guarantee
